

GG Nagarkar

Founder building practical AI agents, DevOps automation, and enterprise software systems

Pune, India | ggnagarkar@gmail.com | ggnagarkar.com

Profile

Founder and product engineer focused on practical AI systems, DevOps automation, and enterprise software delivery. I build products and teams that turn complex technical goals into measurable business outcomes.

GG's career connects enterprise monitoring, observability, operational log analytics, and ITSM with later work in DevOps, cloud platforms, AIOps, and practical enterprise AI. At BMC Software, he progressed through Development Manager and Senior Manager, R&D roles and worked on BMC IT Data Analytics, monitoring-to-incident workflows, and ProactiveNet integration and releases.

Selected Highlights

- Founder of Applied AI Consulting and building OpsRabbit
- Co-founder and product builder across OpexSoftware, REAN Cloud, 7Targets, and OpsRabbit
- BMC product work across monitoring, observability, log analytics, and ITSM integration
- US patents in cloud testing and infrastructure automation
- Enterprise AI, DevOps/SRE, cloud platform engineering, and product delivery leadership

Core Domains

Agentic AI systems	Enterprise AI architecture	AIOps and incident automation
Monitoring, observability, and log analytics	IT service management and incident workflows	DevOps and SRE automation
Cloud infrastructure automation	Platform and reliability engineering	Software delivery and CI/CD

Current Work

Applied AI Consulting

AI, cloud, DevOps, and product engineering company delivering enterprise modernization programs and automation solutions.

OpsRabbit

AI-powered CloudOps/SRE incident investigation and automation platform focused on reducing MTTR and improving operational reliability.

Professional Experience

Product, engineering, and founder leadership across enterprise software, cloud platforms, DevOps, and AI.

Founder / Chief Mentor Applied AI Consulting 2019-04 to Present Pune, India Founded and leads Applied AI Consulting, working with teams on practical AI adoption, product engineering, cloud modernization, DevOps automation, and delivery acceleration. AI Agents Product Engineering Cloud Architecture Advisory	Co-Founder OpsRabbit 2025-01 to Present Pune, India Co-founded OpsRabbit to build AI-assisted incident investigation and operations automation for DevOps, CloudOps, and SRE teams. AIOps SRE DevOps Product Strategy
Co-Founder / CTO 7Targets 2019-04 to 2024-12 Pune, India Co-founded and led technology for 7Targets, an AI-assisted sales automation product focused on follow-ups, response handling, and sales workflow productivity. AI Sales Automation SaaS Product Technical Sales	VP Engineering & Products / Cloud Platform Hitachi Vantara 2018-10 to 2019-03 India Worked on cloud platform engineering and product leadership initiatives after the REAN Cloud and Hitachi Vantara transition. Cloud Platform Engineering Leadership Enterprise Systems
Engineering & Product Leadership REAN Cloud 2016-08 to 2018-09 India Helped scale DevSecOps and cloud automation capabilities after OpexSoftware joined REAN Cloud. DevSecOps Cloud Automation Platform Engineering	Co-Founder OpexSoftware 2013-01 to 2016-08 India Co-founded OpexSoftware to deliver DevOps, cloud integration, and automation solutions for enterprise customers. DevOps Cloud Integrations Automation Product Development
Development Manager / Senior Manager, R&D BMC Software 2004-01 to 2012-12 India Progressed through Development Manager and Senior Manager, R&D roles while working across monitoring, observability, operational log analytics, and IT service management integrations. Led work on BMC IT Data Analytics, including machine-data collection, indexing, search-driven troubleshooting, event correlation, and root-cause investigation. Also connected monitoring signals with incident-management workflows and contributed to ProactiveNet integration, release readiness, and cross-product engineering execution after its acquisition by BMC. Monitoring Observability Log Analytics ITSM Incident Management Engineering Management Release Management Product Engineering	Software Engineering TCS 2001-01 to 2003-12 India Started professional software engineering work in enterprise delivery environments, contributing to software development, implementation, and technical problem solving for customer programs. Software Engineering Enterprise Delivery

Selected Product Work

Applied AI Consulting

2019 - Present

AI, cloud, DevOps, and product engineering company delivering enterprise modernization programs and automation solutions.

OpsRabbit

2025 - Present

AI-powered CloudOps/SRE incident investigation and automation platform focused on reducing MTTR and improving operational reliability.

7Targets AI Assistants

2019 - 2024

AI-assisted sales follow-up and response automation platform for outbound/inbound sales workflows.

DeployNow (REAN Cloud)

2016 - 2019

Deployment acceleration product initiative aligned with cloud automation, release reliability, and enterprise-scale delivery workflows.

TestNow (REAN Cloud)

2016 - 2019

Testing acceleration product initiative for enterprise cloud delivery with stronger validation coverage and faster release cycles.

REAN Cloud Platform Products

2016 - 2019

Platform product portfolio including DeployNow, TestNow, and related cloud/DevOps accelerators for enterprise software delivery.

BMC IT Data Analytics (ITDA)

BMC Software era

Led work on BMC IT Data Analytics, separate from the later Helix branding. Helped build and launch capabilities for collecting and indexing machine data, real-time search across operational logs, event correlation, anomaly investigation, and root-cause troubleshooting for IT operations teams.

Monitoring and ITSM Integration Solution

BMC Software era

Worked on an integration solution connecting monitoring signals with IT service management workflows. The project helped operations teams turn alerts and events into actionable service-management context for incident handling and follow-through.

ProactiveNet Integration and Release Management

BMC Software era

Contributed to ProactiveNet integration work after its acquisition by BMC and helped manage subsequent product releases. The work included cross-product integration, release readiness, engineering coordination, and operational quality for a platform spanning performance monitoring, events, metrics, analytics, diagnostics, and impact management.

Patents

US11074165B2 - Generating testing infrastructure on a cloud for testing software applications (granted)

US11099976B2 - Generating code for deploying cloud infrastructure (granted)

Education and Contact

Education: IIT Delhi
